Service start-up report

Generated: 2026-10-16 10:52:25
Target: siem (local)
Operation: **start** · Recorded window: 52s · compose exit code: **0**

Warnings

Found after the start settled, from *docker compose ps -a* and the logs written during the start (the same error lines that put a red badge on a tile in the Global Visualization page).

Service	Problem
kibana	1 error line(s) in its log, e.g. "[2026-10-16T08:53:12.358+00:00][WARN] [plugins.alerting.usage] Error executing alerting telemetry task: getTotalAlertsCountAggregations - {}"

Resource usage recorded while the stack was brought up. Each dashed red vertical line marks a major event (a container created, started, going healthy or unhealthy, a one-shot job finishing, or a container stopping or being removed), numbered in a band above the graph; events within 1.5s of each other share one number, and the event key under the host graph says what each number covers. The largest host CPU peak is called out with the marker it lines up with. **Figure 1** shows how these services fit together – the per-container graphs below track each box in it.

Reading the metrics. **SD** (standard deviation) is the typical distance of a value from the mean. The **95th percentile** is the level usage stayed at or below 95% of the time; a **peak** far above it is a short burst rather than sustained load. **P(≥x)** is the share of the recording spent at or above *x*: the chance that a randomly picked moment was that busy. "How unusual the peak is" counts SDs above the mean; more than about 3 is a rare spike.

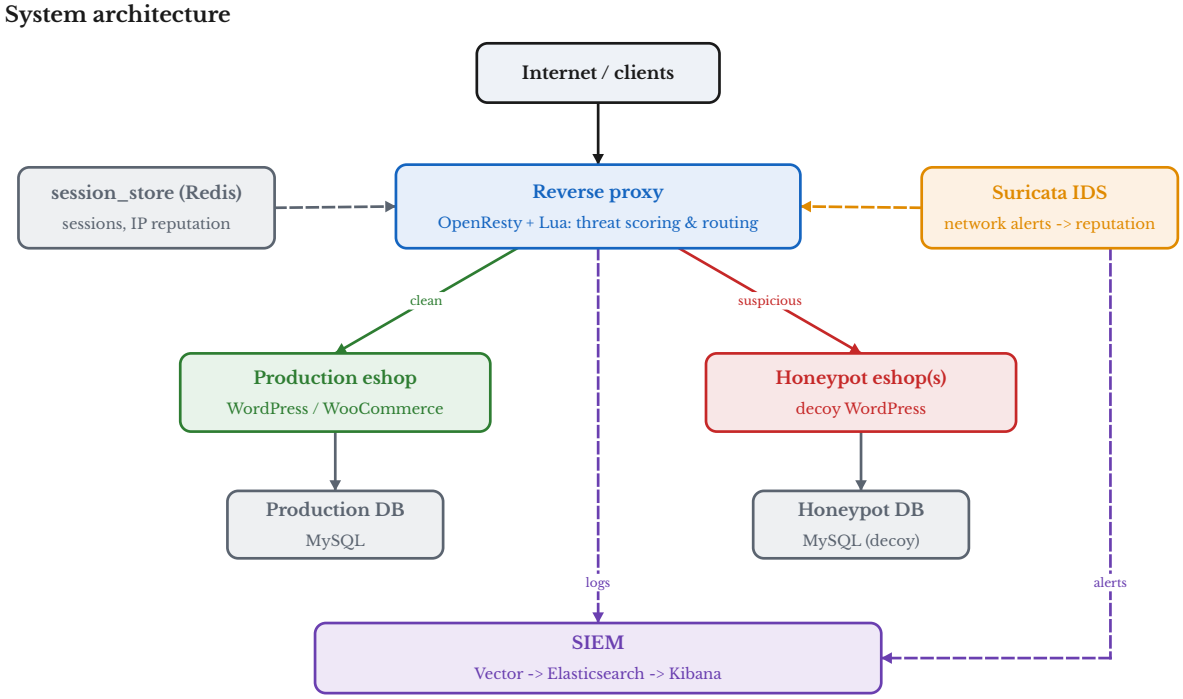

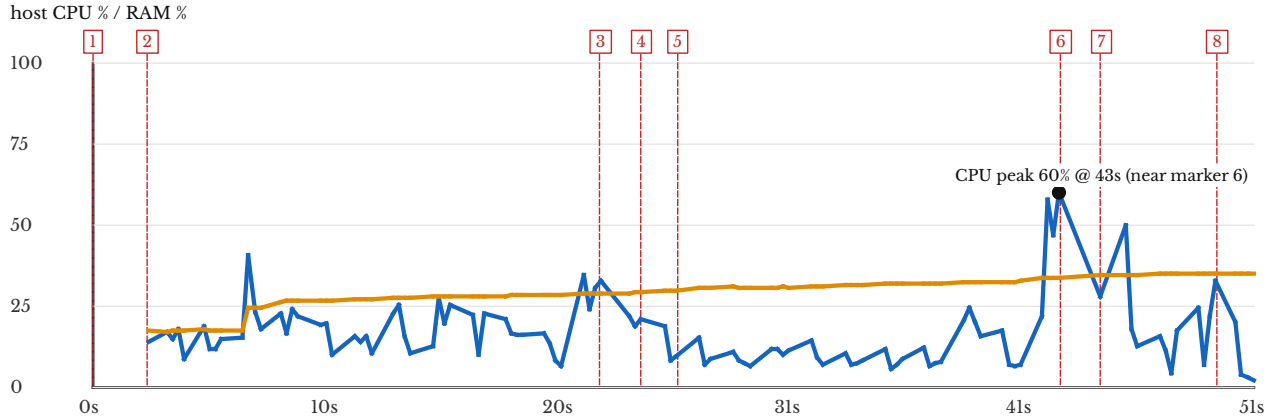

Figure 1. System architecture: the services whose CPU / memory the per-container charts below track as the stack is started.

1. Overall system (host)

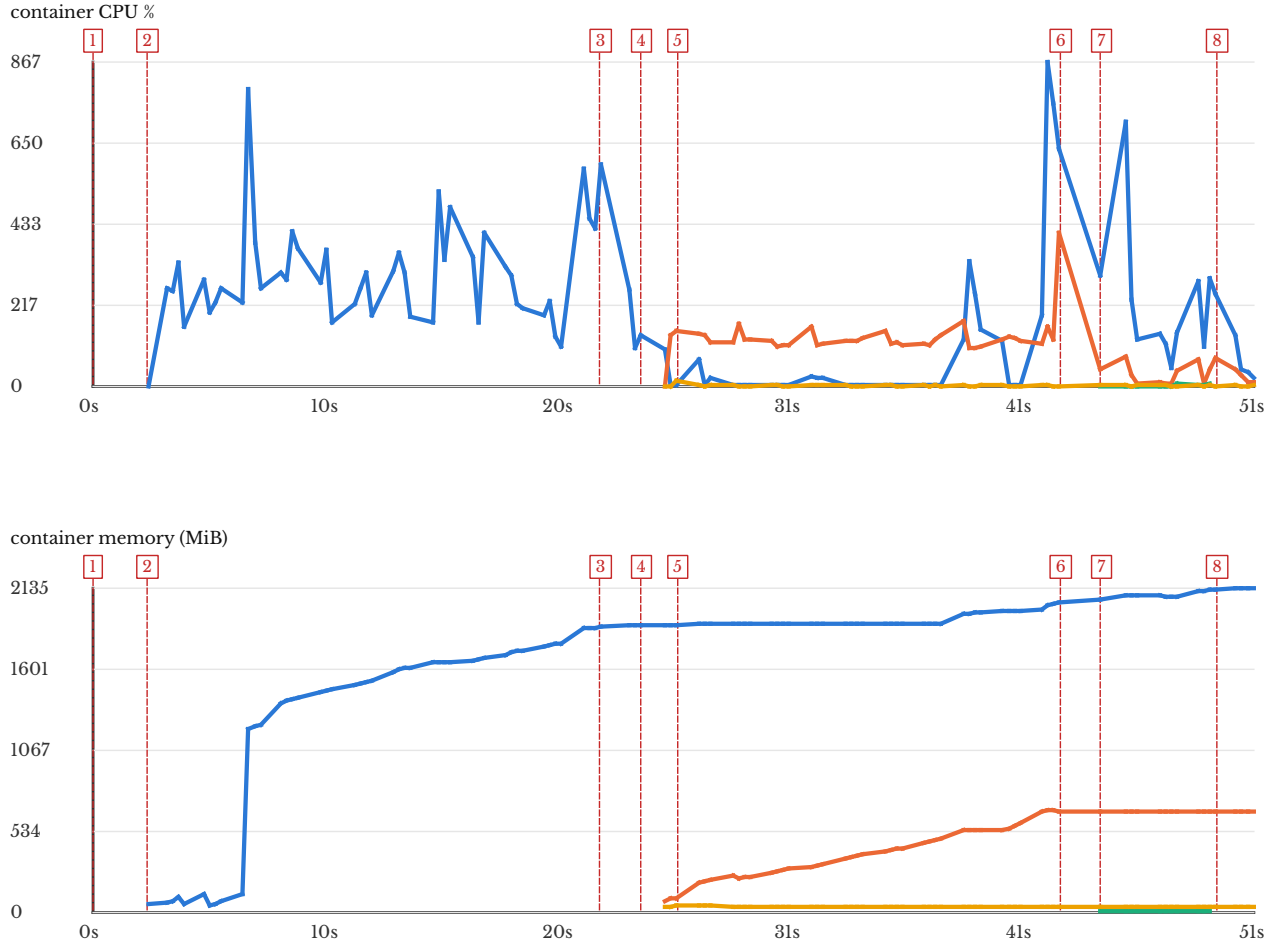

Event key (marker numbers on all graphs)

Marker	Elapsed	What happened
1	0s	created: init-password, kibana_dashboards_setup, es01, kibana, vector_inbound
2	2s	running, health pending: es01
3	22s	started: init-password; healthy: es01
4	24s	finished: init-password; running, health pending: kibana, vector_inbound
5	26s	healthy: vector_inbound
6	43s	started: kibana_dashboards_setup; healthy: kibana
7	44s	removed: init-password
8	50s	finished: kibana_dashboards_setup

Probability metrics: host		
Host CPU, mean ± SD	**16.5% ± 10.5**	average over 107 samples; the SD is the typical swing around it
Host CPU, 95th percentile / peak	**33.9% / 59.7%**	95% of the time usage was at or below the first figure
Host CPU, how unusual the peak is	**4.1 SD above the mean**	more than ~3 SD is a rare spike rather than normal fluctuation
Host CPU, P(≥50%)	**2.8%**	chance a random moment of this recording was at least this busy
Host CPU, P(≥80%)	**0.0%**	chance a random moment of this recording was at least this busy
Host RAM used, mean ± SD	**29.1% ± 4.7**	average over 107 samples; the SD is the typical swing around it
Host RAM used, 95th percentile / peak	**34.8% / 35.0%**	95% of the time usage was at or below the first figure
Host RAM used, how unusual the peak is	**1.2 SD above the mean**	more than ~3 SD is a rare spike rather than normal fluctuation
Host RAM used, P(≥50%)	**0.0%**	chance a random moment of this recording was at least this busy
Host RAM used, P(≥80%)	**0.0%**	chance a random moment of this recording was at least this busy

2. Per-container

CPU and memory were read from the containers' cgroup files every 0.25 s.

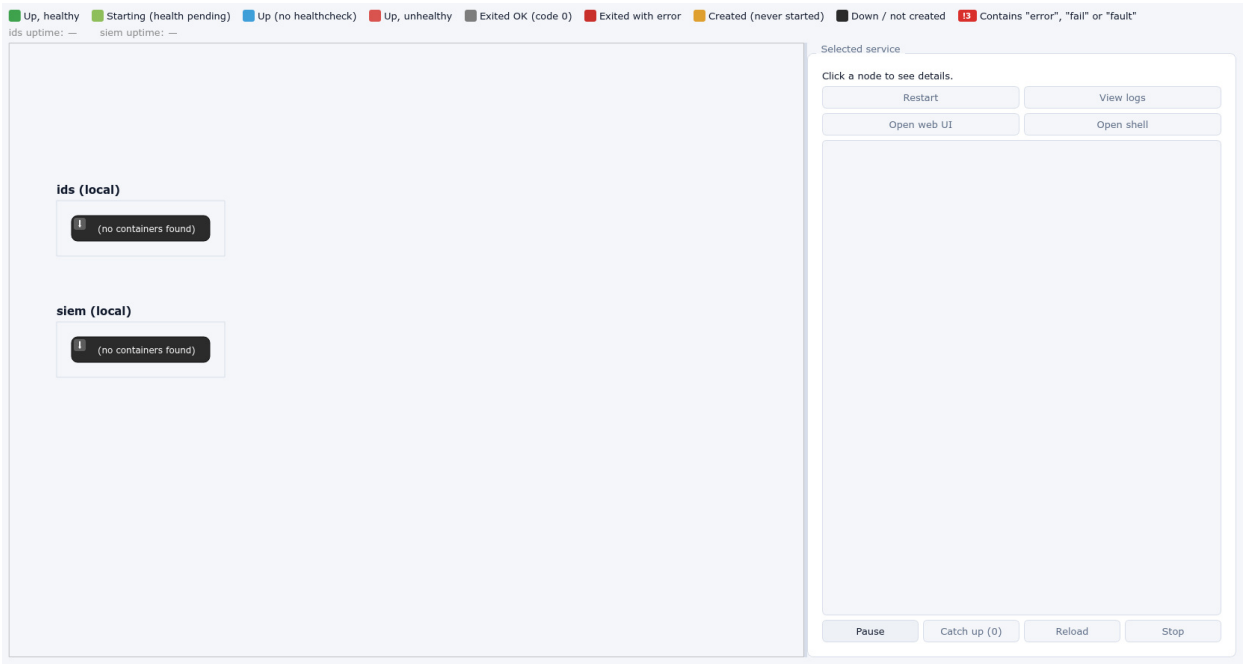

Probability metrics: per container					
Container	**CPU mean ± SD**	**CPU p95 / peak**	**P(CPU ≥ 50%)**	**Memory MiB, mean ± SD**	**Memory MiB, peak**
es01	198.0% ± 193.2	588.9% / 866.8%	67.3%	1661 ± 556	2135
kibana	100.6% ± 63.5	159.0% / 409.3%	75.4%	463 ± 188	666
kibana_dashboards_setup	1.1% ± 2.4	5.8% / 6.2%	0.0%	2 ± 1	3
vector_inbound	0.2% ± 1.5	0.1% / 11.7%	0.0%	36 ± 1	38

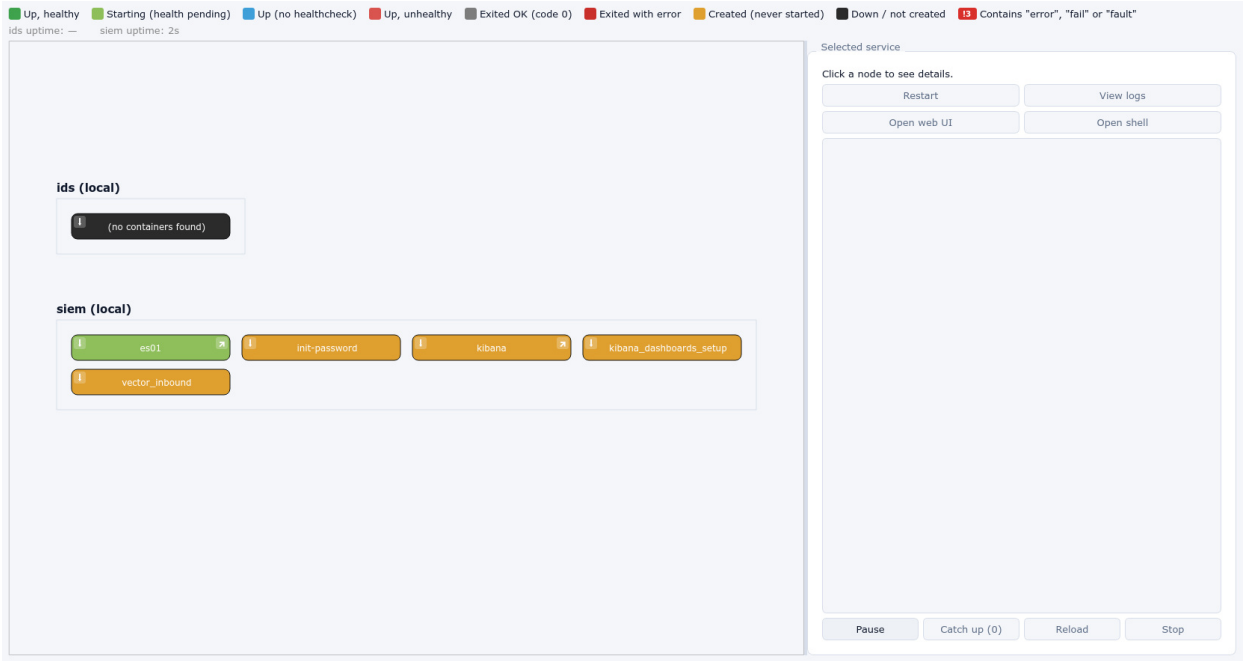

P(CPU ≥ 50%) is the share of the recording the container spent at half a core or more, i.e. the chance of catching it that busy at a random moment. A peak far above the p95 means a short burst (typically start-up work or a first healthcheck) rather than sustained load.

3. Global Visualization page as the stack changes state

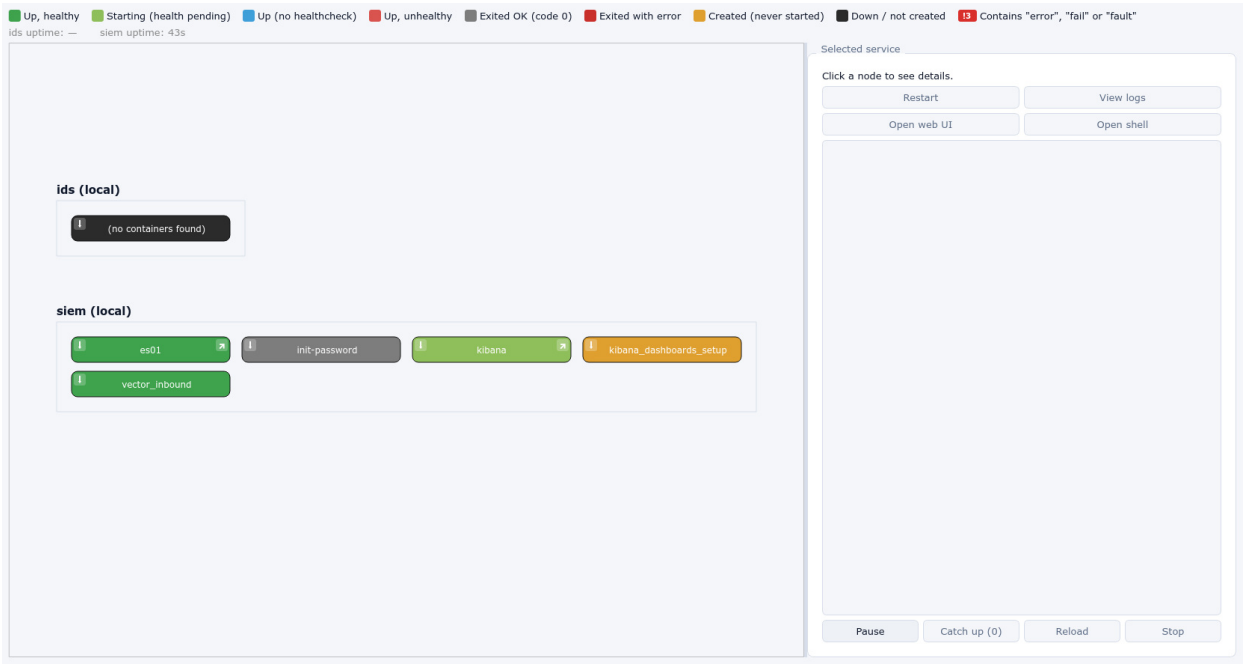

Before: stack idle / not yet changed

Starting: containers coming up

All containers healthy — but 1 warning(s), see Warnings

4. Event log

Marker	Elapsed	Event
1	0s	init-password created
1	0s	kibana_dashboards_setup created
1	0s	es01 created
1	0s	kibana created
1	0s	vector_inbound created
2	2s	es01 running, health pending
3	22s	init-password started
3	22s	es01 healthy
4	24s	init-password finished
4	24s	kibana running, health pending
4	24s	vector_inbound running, health pending
5	26s	vector_inbound healthy
6	43s	kibana_dashboards_setup started
6	43s	kibana healthy
7	44s	init-password removed
8	50s	kibana_dashboards_setup finished
